

THE PUNCHLINE

UNIPUNCH PRODUCTS, INC.

Punch & Die Sharpening

Tooling Maintenance - The key to better hole quality

Your goal is to produce quality parts which includes quality holes.

In order to keep your tooling at its peak performance, sharpening your punches and dies often, is the standard requirement for punching quality holes, extending your tool life and lowering your press tonnage.

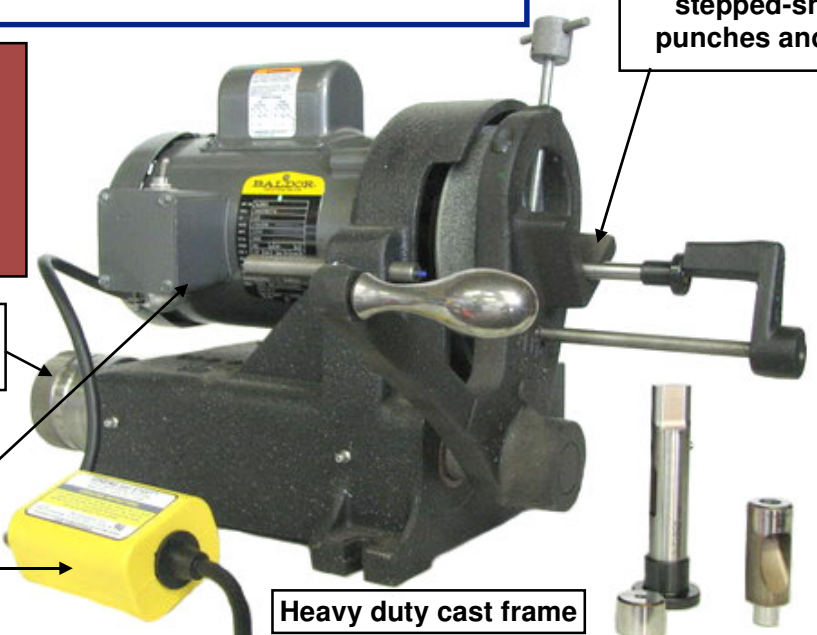

The UniPunch model 1125 bench style sharpener can be conveniently located near your presses or press brakes for quick tooling maintenance

Precision feed dial for minimum sharpening cuts

Reliable 1/2 H.P. 3450-RPM motor and Saf-Start Plug

Heavy duty cast frame

Vee block clamping for straight or stepped-shank punches and dies

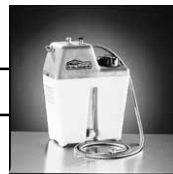

Visit our online catalog for complete 1125 sharpener specifications.
