UNIPUNCH PRODUCTS, INC.

Tube & Pipe Punching Solutions

## Punch Multiple Holes in Tube and Pipe with each press stroke

**New!**

### TP-2M Tube Punching Units

Model TP-2M

For distortion-free holes in the end of tubing, UniPunch Products is introducing the *new* TP-2M. This mandrel designed tube punching unit is capable of piercing holes 180° apart with each press stroke.

Based on the popular TP-2 design 'C'-Frame tube punching unit, a support mandrel is integrated to punch a thru hole on the end of the tubing with no distortion. The mandrel is ground to fit the tubing shape.

Part gauging can be provided to position the holes at a specified dimension.

For price quote or to place an order please provide....

- Tube size and shape
- Tube material type (steel, aluminum etc.)
- Wall thickness
- Hole size required and location

### Other available Mandrel Tube Punching Tools - *designed to your specific requirements*

TANDEM TUBE PUNCHING UNITS FOR SPECIFIED HOLE CENTERS

VERTICAL & HORIZONTAL GANG PUNCHING SYSTEMS BUILT FOR REPEAT PART APPLICATIONS

For a tooling quotation, just provide drawings or CAD files.

Our engineering department will review your requirements and recommend tooling for your application.
